# WELCOME MESSAGE

---

## HI THERE!

Welcome to Flow Links Fire & Safety Solutions.

Fire safety is not just a system requirement — it is a responsibility.

At Flow Links Fire & Safety Solutions, we understand that every fire protection system we design, install, and commission exists to protect lives, assets, and operational continuity. Our approach is rooted in compliance, engineering discipline, and a deep respect for the environments we safeguard.

We work closely with clients, consultants, and authorities to deliver systems that are reliable, approved, and built to perform when they matter most. As you plan current and future projects, we look forward to supporting your fire and life safety requirements with professionalism, accountability, and confidence.

As our future client, you can be assured that we bring our most experienced teams to your project — to plan carefully, execute responsibly, and re-work where required because we know -

*Preparedness Saves Lives.*

# ABOUT COMPANY

---

Flow Links Fire & Safety Solutions is a Saudi-based provider of fire protection and safety systems supporting commercial, industrial, and infrastructure projects across the Kingdom of Saudi Arabia.

Flow Links Company is built on people. We are a multicultural team bringing together diverse backgrounds, technical expertise, and practical experience, united by a shared commitment to safety and quality. Each team member takes ownership of their role, working with responsibility, precision, and attention to detail. This mindset enables us to deliver reliable fire and safety solutions in critical and high-risk environments.

With a strong understanding of Saudi Civil Defense regulations, international standards, and project execution requirements, we work closely with our clients to align fire and safety systems with operational needs and compliance expectations. At Flow Links, we don't just install systems, we build dependable safety partnerships driven by trust, teamwork, and consistent performance.

***Strong foundations begin long  
before the first brick is laid.***

# OUR VISION & MISSION

## VISION

To be a trusted fire and life safety solutions provider in Saudi Arabia, recognized for compliance-driven execution, engineering integrity, and systems that protect lives and critical assets.

## MISSION

Our mission is to deliver fire and safety solutions through a structured, standards-based approach that prioritizes life safety, regulatory compliance, and system reliability. We focus on delivering well-engineered, authority-approved systems that perform consistently across diverse environments and risk profiles.

Through disciplined processes and experienced teams, we aim to support safer buildings, facilities, and infrastructure aligned with national safety objectives.

# AREAS OF OPERATION

## Fire Alarm & Detection Systems

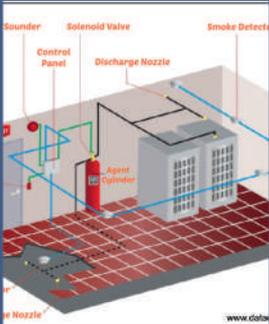

We design and install conventional, addressable, and intelligent fire alarm systems, including fire alarm control panels (FACP), networked workstations, and monitoring interfaces. Our scope covers smoke, heat, flame, beam, multi-sensor, and gas detectors, along with manual call points, sounders, and visual notification devices, engineered to meet authority and project requirements.

## Fire Suppression Systems

Our fire suppression solutions include gaseous systems such as FM-200, NOVEC 1230, CO<sub>2</sub>, and aerosol systems, as well as water-based systems including sprinklers, hydrants, deluge, water mist, foam, and wet chemical kitchen hood systems. Systems are engineered based on risk assessment, occupancy, and code compliance.

## Early Smoke Detection Systems

We provide advanced early warning fire detection using aspirating smoke detection (ASD / VESDA-type) systems with air sampling pipe networks and laser-based detection. These systems are designed for critical environments such as data centers, control rooms, and clean areas where early detection is essential for asset and operational protection.

*Prepared systems perform when  
It matters most.*

# WE ALSO PROVIDE

## PA & Low Current Systems

We design and integrate emergency & public addressable communication systems, including voice evacuation solutions synchronized with fire alarm systems. Our low-current scope includes CCTV surveillance, access control systems, intrusion detection, structured cabling, and system interfacing to enable coordinated emergency response and centralized monitoring.

## Annual Testing & Maintenance

We provide annual testing, inspection, and preventive maintenance services to ensure the continued performance and compliance of fire and life safety systems. Our scope includes functional testing, cause-and-effect verification, inspection reporting, certification support, and readiness for Saudi Civil Defense inspections, helping systems remain reliable throughout their operational lifecycle.

## Custom Project & Engineering

We deliver custom project execution and engineering solutions, including feasibility studies, system engineering, budget-aligned installations, and end-to-end project coordination. Our capabilities include panel fabrication, system assembly, testing, documentation, and flexible delivery models tailored to project requirements and existing site conditions.

*Every test today  
Prevents a failure tomorrow.*

# OUR APPROACH

We work in a structured, compliance-driven manner that keeps you protected at every stage of the fire system lifecycle.

Our approach is simple: keep you & your buildings **SAFE**

**S**

## System Risk Assessment

Each fire and life safety system is engineered based on risk analysis, occupancy classification, fire load calculations, and applicable Saudi Civil Defense, NFPA codes.

**A**

## Authority Compliance

We manage drawings, calculations, material submittals, and approvals through relevant authorities to ensure regulatory compliance and inspection readiness.

**F**

## Field Execution

Installation is carried out by trained teams using approved materials, verified layouts, and controlled workmanship to ensure system integrity and reliability.

**E**

## Evaluation & Documentation

All systems undergo functional testing, cause-and-effect verification, commissioning, and handover with complete as-built drawings, test reports, and O&M manuals.

# WHY CHOOSE US?

---

## ENGINEERING EXPERIENCE

Our engineers and technical professionals bring 10+ years of combined experience in designing, installing, testing, and maintaining complex fire and life safety systems across commercial, industrial, and infrastructure projects.

## COMPLIANCE-FIRST DELIVERY

We operate with a strict focus on Saudi Civil Defense approvals, international codes, inspection readiness, and documentation accuracy, reducing project risk and approval delays.

## END-TO-END CAPABILITY

From system design and installation to testing, commissioning, and annual maintenance, we provide a single-point responsibility across the full fire system lifecycle.

# رؤية VISION 2030

المملكة العربية السعودية  
KINGDOM OF SAUDI ARABIA

## SAUDI VISION 2030 MARKET ALIGNMENT

### Develop Saudi Talent

We contribute to Vision 2030's human-capital objectives by training local teams, technicians, and engineers, therefore, embedding standardized safety practices that build long-term fire & safety capability within the Kingdom.

### Long Term Sustainability

Through disciplined documentation, testing, and maintenance, we help clients achieve inspection readiness and long-term system reliability.

### Enhance Life & Asset Protection

We contribute to Vision 2030 by delivering compliant fire and life safety systems that protect buildings & life, and operations across commercial, industrial, and public infrastructure developments.

### Support Infrastructure & Megaprojects

Our systems support high-demand environments including mixed-use developments, industrial facilities, and infrastructure projects aligned with Vision 2030 growth.

Delivering Quality Across  
The Kingdom of Saudi Arabia
